DECLARATION

We hereby declare that the work which is being presented in the Mini Project " **Grocery Management System"** , in partial fullfillment of the requirements for Mini Project viva Voce,is an authentic record of our work carried under the supervision of Mr. Akash Chaudhary Sir.

Signature of group members:

Saurabh Singh(171500303)

Vishal Agrawal(171500384)

Prashant Agarwal(171500229)

Course: B.Tech

Year: 3rd

Semmester: 6th

ACKNOWLEDGEMENT

It is our pleasure to be indebted to various people, who directly or indirectly contributed in the development of this project and who influenced our thinking, behaviour, and acts during the project preparation.

We express our sincere gratitude to our **Mentor Mr. Akash Chaudhary Sir** for providing us an opportunity to undergo this project based on Web Technology.

We also extend our sincere appreciation to friends who provided their valuable suggestion and precious time in accomplishing our project work.

Lastly, We would like to thank the almighty and our parents for their moral support and our friends with whom we had shared our day to day experience and received lot of suggestions that improved our quality of works.

ABSTRACT

Online Grocery Management System is the norm these days. . Purpose of Online Grocery Shopping system is to allow customer to shop virtually using internet.Computerization of online store will increase the ease, efficiency and reduce the chances of manual errors. With the popularity of PCs, and mobiles easy access to Internet and World Wide Web (WWW), Internet is increasingly used by consumers & vendors as a channel for shopping, payment & other operations.

The system will ease the shopping operations for customer of online store. It will provide vendor or administration functionality to manage categories and products. Consumer will be able to browse and search products under different categories. Selected products or items selected for purchase would be added into the virtual shopping cart which can be managed separately by customer. It can be examined at any time by customer for selected products, their quantity & price. These would be main functionalities apart from some usual operations such as login, logout, manage profile etc.

CONTENTS

CHAPTER 1
INTRODUCTION

1.1   General Introduction

The main aim for developing this project where customer can purchase and order groceries online.The system is very useful for customer can easily buy the grocery products from home through internet.The system reduces lots of work load for customer as well as owner.By this system online grocery management system ,the product is directly delivered to the customer.The system functionality of products and orders is stored on server side in a web service.

The main objective of proposed system, is used to provide Online Grocery Shopping solution to consumers and vendors. It will automate some of the basic operations of an online store. Scope would be to provide basic functionalities using a web application so that those manual process can be automated. It will include to provide administration access to vendors and admins and user specific access to customers.

1.2   Area of Computer Science

This project mainly covers the Area of Web Development of Computer Science. Through this project, we are trying to climb one step in this vast field of Computer Science. It is totally of web development project.

Web development-
Web development is a specialized type of computer programming focused on websites and web applications. Web development deals with building technical front-end and/or back-end code that informs site function. Web developers may work exclusively on front-end code, back-end code, or both. Employment can involve independent freelance work or working in an organization's marketing or IT department.

1.3   Hardware and Software Requirements
   ● Hardware

1. Personal computer with 1GB RAM

2. Internet Connection

● Software

1. Bracket(Text Editor)

2. XAMPP Server

3. Node.js

1.4 Technology Used

● Front-end:

HTML:used to structure the web page.

CSS:used to give styling to web page.

JAVASCRIPT:used to generate and handle the events.

● Back-end:

PHP:programming language that allows web developers to create dynamic contents that interact with databases.

Mysql:structured query language used to manage and store data in the form of tables.

CHAPTER 2
PROBLEM DEFINITION

The motivation for this project came when we faced problem like for purchasing anything related to grocery we need to travel a lot by investing lots of time and money.We are not able to properly judge which is the right product and what is the proper cost of it so this project ensures lot of things as follows

1. It saves time. Shopping online alleviates the need to walk up and down store aisles.

2. No Unwanted Luxury Purchases.

3. Find Everything We Need.

4. We Can't Personally Look at Items.

5. Accurate price.

6. Convenience of Shopping at home.

7. Wide variety / range of products are available.

8.Good discounts / lower prices.

9. Get detailed information of the product.

10. We can compare various models / brands.
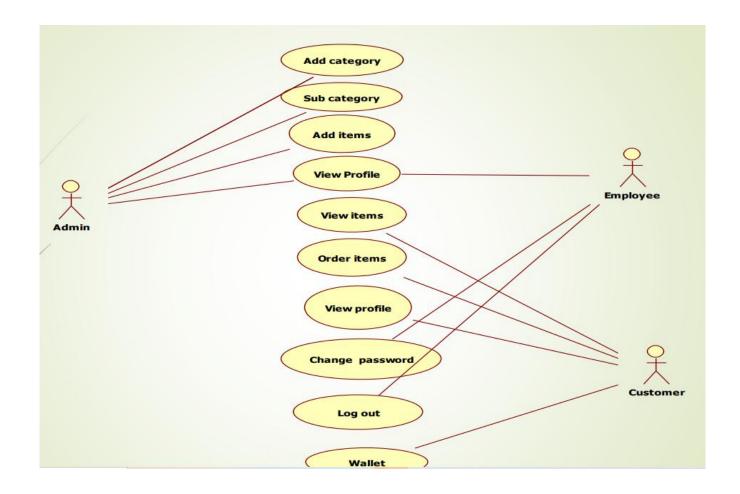

CHAPTER 3
OBJECTIVES OF THE PROJECT

Online grocery management system increasingly attracting the customers and vendors because they have ability to attract different types of other users through interacting items,so this project will minimize the cost of purchasing the things offline. Basically the main objective of the project is to develop a website named online grocery management system where user or customor can purchase different items of grocery .The project aimed to fullfill the requirements from user side which could minimize the dependency of people on offline purchase. It also aims to reach users beyond regional boundaries .The following other objectives could be fullfilled by the project.

1. Through the online grocery management System user can purchase different items online in a more efficient and attractive way.
2. It will be more flexible for them.
3. It is easy to reach masses and more convenient for them.
4. It can saves lot of money.

CHAPTER 4
## METHODOLOGY

Use Case Diagram
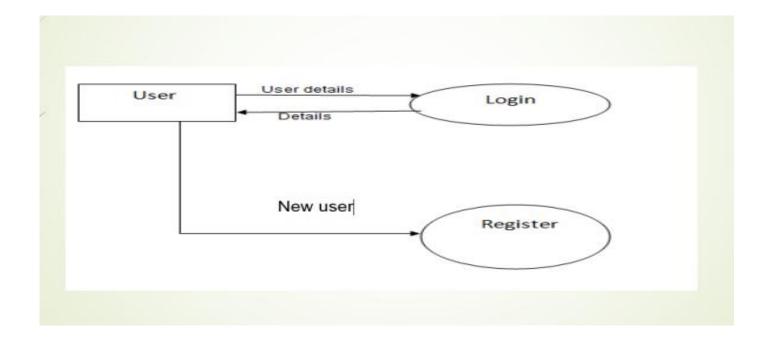

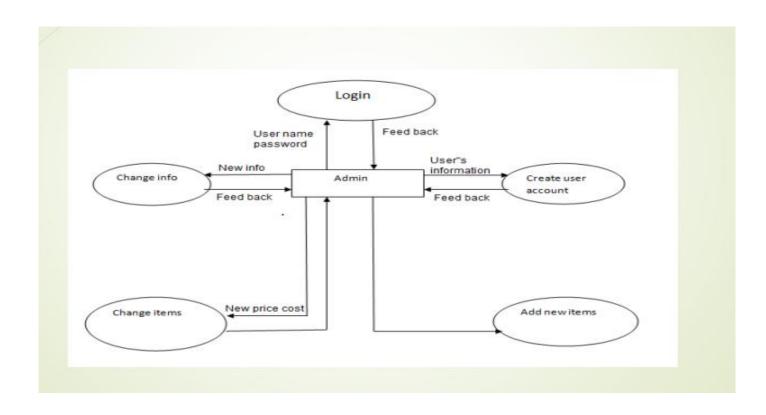

Data Flow Diagrams

GMS is the Global Marketing Services

User — User details → Login

Feed back
Create user account
Change items
New price cost
Add new items

CHAPTER 5
IMPLEMENTATION DETAILS

We have implemented user panel which consist of Login page ,sign up page which will allow users to enter their accounts.after giving their credentials they can log into their accounts and can find grocery items.

We have used mysql as database where we created tables so that we can store login and sign-up data related to users and admin data.
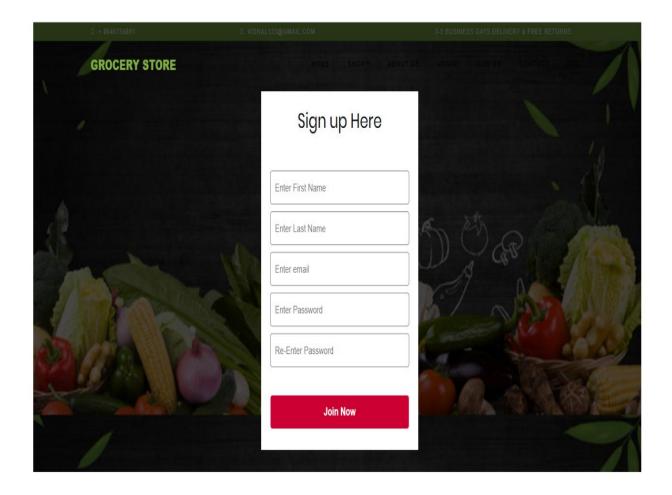

Tables created for sign-up purpose:

| Fields	Datatype
Name	Varchar
Email	Varchar
Address	Varchar
Contact	Int
password	Varchar

Sign-up page

This functionality provided to the user and admin ,when user/admin want to access the grocery items he/she has to first sign in to the system.The data base administrator will maintain the data in database, then only user can access the content.We have used mysql database in which we have created table to store admin and user data.User can register himself/herself only if he has given the details like name,id,contact number,password ,and address.

Some Glimpses from the Project:

This is the signup page where user can sign up by entering all his/her detail in order to access the site. User can visit the site and can purchase various items related to groceries.

CHAPTER 6

TESTING

Software testing is the process of executing a program with intension of finding errors in the code.It is a process of Evolution of System or its parts by manual or automatic means to verify that it is Satisfying specified or requirements or not. Generally,no system is perfect due to communication problems between user and developer,time constraints,or conceptual Mistakes by developer.To purpose of system testing is to check and find out these errors Or faults as early as possible so losses due to it can be saved.

Testing is the fundamental process of software success.Testing is not a distinct phase in system development life cycle but Should be applicable through out all phases i.e. design developmentAnd maintenance phase. Testing is used to show incorrectness and considered to succes when an error is detected.

CHAPTER 7
CONTRIBUTION SUMMARY

There are mainly three panels in this project . All three pannels are connected and interdependent on each other.

1. Admin Panel
2. User Panel
3. Payment Panel

Administrator Panel:

In this administration of whole company is to be maintained. The complaints and suggestions dropped by customers must be checked and required steps are to be implemented. Supervision of employee and the requirement of business must checked and required steps to be taken.

This panel consist of different components like admin login, admin signup etc. Where admin can add various items and products related to grocery through the accessibilty of various features by the admin itself.Our group member **Vishal Aggrawa**l worked on this panel.

User Panel:

The user must have the personal account and using his login details customer first check the products availability and orders the required products. If the server is busy then customer has to retry once again and continue his request.He can check on various products availability and choose the products required.

It consist of different components like User login ,User Signup which deals with the accessibility of various features by the user .User can buy the items and products available at the stock online after entering its detail through payment module.Our group member **Saurabh Singh** worked on this module.

Payment Panel:

We have one ways of payment options Pay now.

Customer can pay in two cases when he orders the stocks and after he receives the stock. We provide credits and debit card facility i.e on line banking system. We provide various bank payments.

Our group member **Prashant Agarwal**   worked on this panel.

CHAPTER 8

FRONT END AND BACK END TASK

The front-end task of admin and user panel are as follows. This consist of admin login and sign-up page, user login and sign-up page through languages like CSS, HTML,JAVASCRIPT.It also includes the cover-up page,homepage which includes various groceries items .The cover-up page includes various items related to grocery.

Back-end implementation provides search functionality for the user,displays user and their files to the admin.We built admin panel , admin can view user and can delete user also.Admin can also change password functionality for the security reasons.We have used mysql as database where we created tables so that we can store login and sign-up data related to users and admin data.The payment module is also included in this project for payment purpose.

CHAPTER 9

FUTURE SCOPE

• There will be lot of scope to improve this project, since currently basic functionality would be provided.

• Some of the modules to improve are admin part such as personalized recommendations, discount & offer management. For customers, notification & messaging etc can be improved. These can be developed to make it more effective.

CHAPTER 10

3. www.javatpoint.com

CHAPTER 11

CONCLUSION

We have successfully implemented our project "The grocery Management System",through which user can find various items related to grocery. The purpose of the project is to increase the dependency of people online to buy the products. Online Grocery has the ability to engage people in different ways most notably interactivity , social engagement and many more. We had used various languages like HTML, CSS, JAVASCRIPT,PHP and for database we have used mysql where we have created table to store various data related to admin and user.

CHAPTER 12

APPENDICES

Few codes of respective modules are shown
